Profile Summary

Full-Stack Software Engineer with 1+ years of experience in web and mobile development. Proficient in JavaScript/TypeScript, PHP, and cloud technologies to build high-performance applications. Skilled in designing automated data pipelines, real-time architectures, and mobile solutions. Committed to delivering optimized, scalable code through modern development workflows.

Professional experience

Software Engineer (Contract) | Triton solutions

Jan 2026 – Present

- Designed and implemented scalable backend infrastructures using Supabase, leveraging its real-time database and edge functions.
- Architected relational schemas in PostgreSQL, ensuring high performance for community-driven web and mobile applications.
- Developed secure authentication systems, real-time messaging, and matchmaking logic with automated notification services.
- Streamlined development workflows by implementing GitHub Actions for CI/CD automation.

SLIA Institute | Inter Software Engineer

May 2025 – Dec 2025

- Built websites with JWT authentication using React.js and Node.js following RESTful API architecture.
- Developed online ticket reservation system and Payment Portal with payment gateway integration.
- Designed UI/UX for all systems and created admin dashboards; managed servers, mail, and MySQL DBs.

Synnex IT Solutions | Mobile Developer Intern

Jan 2025 – May 2025

- Developed cross-platform Android & iOS apps using Flutter following clean architecture patterns.
- Contributed to multiple client projects, enhancing both front-end and back-end functionalities.
- Implemented responsive UI components and integrated backend services for web and mobile platforms.
- Strengthened practical development skills in collaborative, real-world project environments.

Skills Summary

- **Languages:** Python, C++, Java, PHP
- **Frameworks & Libraries:** React.js, Node.js, Flutter, ASP.NET, Laravel, Numpy, Pandas, Apache Spark, Apache Kafka
- **Databases:** MySQL, MongoDB, Firebase, PostgreSQL
- **Tools & Platforms:** Docker, Git/GitHub, CI/CD, Postman, VS Code, Debezium, Looker Studio
- **Cloud & Deployment** Docker, CI/CD Pipelines
- **Other Technical Skills:** JWT Authentication, Payment Gateway Integration, ML, Data Analytics, Data Pipelines

Notable Projects

Real-time Ecommerce Data Pipeline [Project](#)

- Built a CDC pipeline using Debezium and Kafka to stream live transactions from PostgreSQL.
 - Developed a processing engine with Apache Spark for automated Silver/Gold layer data transformations.
 - Designed a real-time analytics dashboard using Looker Studio to track sales and delivery metrics.
 - Containerized the entire infrastructure using Docker for seamless deployment and orchestration.
- (Debezium, Apache Kafka, Apache Spark, PostgreSQL, Docker, Looker Studio, Python)

Disaster Relief Coordination Mobile Application [Project](#)

- Developed Flutter app connecting disaster victims and volunteers for real-time aid coordination with Google Maps integration.
 - Built in-app chat and voice calling using Agora RTC for secure communication.
 - Integrated Firebase for authentication, real-time database, and notifications with multi-language support.
 - Implemented Google Maps for real-time location tracking and visual representation of requests.
 - Developed multi-language support (English, Sinhala, Tamil) with role-based access.
- (Flutter, Firebase, Agora RTC, Google Maps)

Education Details

- | | |
|---|----------------------|
| • Following BSc (Hons) in Data Science at ICBT Campus | July 2025 – Present |
| • Complete Higher Diploma in Computing and Software Engineering | June 2023 – Feb 2025 |
| • Complete diploma in IT ESOF metro campus | Jan 2018 – June 2026 |
